HACKATHON SUBTHEMES

AI in Healthcare Innovations / Mental Health Support Systems

- Develop AI-driven tools for early disease detection, personalized medicine, or telehealth solutions that improve access to healthcare services in underserved areas.
- Build digital solutions that offer mental health resources, peer support networks, or AI-based chatbots to provide immediate assistance and guidance.

Smart Education Technologies

- Create platforms that utilize AI to personalize learning experiences, enhance student engagement, and provide resources for educators to track progress effectively.

Policy and Governance Solutions

- Design applications that use data analytics and AI to improve public policy decision-making, enhance transparency in government operations, or facilitate citizen engagement.

Renewable Energy Management

- Focus on developing smart grid technologies or energy management systems that optimize the use of renewable energy sources and promote energy efficiency.

Sustainable Urban Development

- Create tools that leverage AI and IoT to address urban challenges such as traffic management, waste reduction, and resource allocation in cities.

Financial Technology for the Underserved

- Develop fintech solutions that provide banking services to unbanked populations, focusing on accessibility and financial literacy.

Disaster Response Technologies

- Innovate solutions that use AI for real-time data analysis during natural disasters, helping communities prepare and respond effectively.

Civic Engagement Platforms

- Create applications that encourage civic participation by facilitating communication between citizens and local governments or promoting awareness of community issues.
